On March 31, 2010 Manitowoc County, Wisconsin awarded a Radio Communication System Contract to Motorola for \$6,382,487. The contract comes almost 7 months after the state originally released the solicitation in September of 2009. The vendors that had expressed interest in this project by attending the pre-proposal conference included Alcatel-Lucent, Bay Electronics, Baycom, Inc, EADS, Federal Engineering Inc, Franks Radio, Grain Communications, Harris Corporation, Harris Stratex Networks, Leonard J. Koehnen & Assc Inc, Motorola, Nielson Communication, and Tait Radio Communications. Cost was a large concern for this project, but more importantly, many of the proposals the County received couldn't meet the County's specifications.

Motorola will be tasked with engineering, furnishing, installing, and commissioning a primary P25 700/800 MHz trunked communications network; VHF overlay network, an interoperability network, control stations, and subscriber equipment.
